

EMPATHY MAP - VBCUA USER ANALYSIS

Deep Analysis of Student and Instructor Persona Behaviors & Needs

1. Executive Summary

Understanding how candidates formulate and deliver conceptual explanations is vital for automated education grading systems. The Voice-Based Concept Understanding Analyser (VBCUA) target persona maps to two major user segments: Students (who need objective, instant conceptual validation) and Instructors (who need to assess students' active vocabulary without subjective grading bottlenecks).

2. What Users THINK & FEEL

- ****Students****: They often think, 'How accurate is this semantic matching engine?', 'Will my regional accent or a brief stutter lower my score?', and 'I need immediate grading on my explanation so I can fix my conceptual gaps before the final exam.'
- ****Instructors****: They feel overwhelmed by manual grading cycles, thinking, 'I spend too many hours listening to audio recordings manually.', 'I want to know if my students are merely memorizing definitions verbatim or if they understand the actual logical dependencies of the subject matter.'

3. What Users SAY & DO

- ****Students****: They say, 'I know the topic, but I find it hard to explain it verbally in class.' During verbal assessments, they tend to pause frequently, use filler words (like 'um', 'uh', 'like') when searching for terminology, and actively request structured diagnostics to improve.
- ****Instructors****: They say, 'I want to assign more oral exams, but I don't have the time to grade them objectively for 100 students.' They record student explanations, check them against a checklist, and write feedback manually.

4. Customer Pains & Gains

- ****Pains (Bottlenecks)****: Subjective grading of spoken answers, delayed feedback cycles, lack of clear metrics showing speech fluency or vocal confidence, and high anxiety during verbal exams.
- ****Gains (Value Delivered)****: Instant objective grading, transparent feedback on filler word counts and pause ratios, side-by-side text comparisons, and structured, actionable diagnostic notes showing clear areas of conceptual improvement.
